

## justitia.swiss – API Changelog – V2.9.2

Version: - 6

Projektphase:

Erstellungs-Datum: 14.04.2026

Autor: justitia.swiss support

Klassifizierung: public

Status: Plattform Release 1.16

## Table of Contents

<b>1 Version [2.9.2]</b>	<b>4</b>
1.1 Breaking Changes	4
1.2 Added	4
1.3 Changed	4
1.4 Deprecated	5
1.5 Security	5
1.6 Migration Notes	5

PROJEKT

  
Justitia<sup>4.0</sup> 

All notable changes to the public API of justitia.swiss are documented in this file.

The format is based on [Keep a Changelog] (<https://keepachangelog.com/en/1.1.0/>)

## 1 Version [2.9.2]

Plattform Release 1.16:

- On TRAIN: 14.04.26
- On PROD: 14.05.26

### 1.1 Breaking Changes

- No breaking changes

### 1.2 Added

- Signature and seal validation:
  - New Endpoint: `POST /api/document-exchange/v2/dossiers/{dossier-id}/documents/{document-id}/validation`  
This endpoint allows you to explicitly trigger a check of signatures or seals for dossier documents.
  - New Dto: `DocumentValidationPublicDto`  
Contains the validation status ( `VALID` , `INVALID` , `UNSURE` , etc.) and the time of the check.
  - New Dto: `SignaturePublicDto`  
Provides details on individual signatures, including revocation status ( `revocationState` ) and information about the signatory.
  - Extension Dto: `DocumentPublicDto`  
The `validation` field has been added to display the validation status directly on the document.
- Profile extensions
  - Extension Dto: `ProfileDto`  
The `postalAddress` field has been added to enable the direct submission of an organisation's postal address.

### 1.3 Changed

- Optimistic Concurrency Control (Versioning): The handling of concurrency has been changed for Transmissions. To enable 'lightweight' concurrent changes, the version fields are now ignored during updates.
  - Note: This lightweight form is only applicable for pure content updates (Metadata e.g. `UpdateSharingTransmissionDto`) or for linking documents (e.g. `LinkDocumentDto`). It is still a strict validation for state changes (e.g. `status` in `UpdateSharingTransmissionStatusDto` )
- Description Participant API: The description of the endpoint for retrieving organisation profiles has been clarified: it is now explicitly intended for retrieving Authority Organisation Profiles.
- Profile definition: The description of `ProfileDto` has been refined and now focuses more strongly on the representation of organisations on the platform.

## 1.4 Deprecated

- Version fields: The following fields are marked as deprecated and will be removed in a future major update, as they are no longer required for concurrency control (in relation with changed concurrency control under 'added'):
  - Field `version` in `UpdateSharingTransmissionDto`
  - Field `version` in `LinkDocumentDto`
  - Field `version` in `UpdateAttachmentTransmissionRequestDto`

## 1.5 Security

- No Security related changes

## 1.6 Migration Notes

- Validation: The new validation function is currently limited to dossier documents (PDF). Please note that a new validator from the Federal Chancellery is planned for 2027, which may result in changes to the signature attributes.
- Concurrency: Existing implementations that handle HTTP status 409 Conflict due to version conflicts during transmission should check whether this logic is still necessary, as the version field is now ignored on the server side
